

## PLAN OF DAY

INDJI WATCH “PLAN OF DAY” ENABLES RENEWABLE ENERGY PROFESSIONALS TO MAKE MORE ACCURATE, INFORMED DECISIONS ABOUT MAINTENANCE SCHEDULING AND EMPLOYEE SAFETY.

Wind farm maintenance can be dangerous work for crews working on blades or anywhere on the turbine. Having advance warning of threatening weather such as lightning or high wind is important for scheduling repairs and maintenance and critical to employee safety. With your busy schedule, you need a tool that easily keeps you up to date with rapidly changing weather patterns.

### INTUITIVE DASHBOARD DISPLAY

The Plan of Day is a visual dashboard that offers you the ability to quickly identify rapidly changing weather at-a-glance, allowing you to be more proactive in mitigating potential impacts to your operation and employee safety. The intuitive display provides a continuously updating view of current and approaching weather threats. Simply open the dashboard, choose your location and view the display as needed. Data will be refreshed automatically.

You can seamlessly transition from one site to the next in the Plan of Day, enabling you to easily check forecast conditions at many sites, allowing you to make quick, intelligent decisions for the entire fleet.

### A PARTNER IN THE INDUSTRY

As the industry grows and competition increases, the drive to increase efficiency and productivity of your renewable energy assets continues. You need tools that help you achieve those objectives and Indji Watch Plan of Day continues to emphasize Indji System’s commitment to help our clients improve profitability while maintaining safety. Contact us to see how Indji Watch can help you.
